Chris Jones

This webinar will provide an introduction to the structure of the water sector in the UK with a focus on England and Wales. It will also explore the key players and wider innovation ecosystem landscape as well as the current innovation challenges and opportunities.

- The water sector
 - Water environment
 - Structure of the water sector
 - Regulation of the water sector
 - Wider ecosystem
- Challenges facing the sector
- Barriers to innovation and innovation opportunities
- Q&A

The Water Sector

A graphic of stylized water droplets in a dark red color, arranged in a diagonal line from the bottom left towards the top right, set against a solid blue background.

The water environment

The water environment

Structure of the UK water sector

Water and Sewerage Companies (WaSCs)

- ANH Anglian Water
- WSH Dŵr Cymru
- HDD Hafren Dyfrdwy
- NES Northumbrian Water
- SVE Severn Trent Water
- SWB South West Water
- SRN Southern Water
- TMS Thames Water
- UUW United Utilities Water
- WSX Wessex Water
- YKY Yorkshire Water

Water Only Companies (WOCs)

- AFW Affinity Water
- BRL Bristol Water (merged with South West Water)
- PRT Portsmouth Water
- SEW South East Water
- SSC South Staffs Water
- SES Water

& New Appointments and Variations (NAVs)

These companies came together to develop the [UK 2050 Water Innovation Strategy](#) (also with Scottish Water and Northern Ireland Water and other organisations)

Current structure of the UK water sector

Future regulatory framework

On the 20th of January 2026, the Department for Environment, Food & Rural affairs (DEFRA) published a new paper. Key proposals are:

A single integrated water regulator

- Replaces Ofwat, the DWI and the water-related functions of the Environment Agency and Natural England
- Economic, environmental, public health and enforcement powers brought together under a single body

More proactive, supervisory regulation

- Stronger oversight of company performance and asset health
- Earlier intervention where risks emerge

Regional Water System Planning Authorities established

- Nine regional bodies responsible for strategic, long-term planning
- Focus on resilience, infrastructure investment and alignment with housing/growth priorities

Improved consumer protection

- A new independent water ombudsman with binding powers on complaint resolution

The Welsh Government released their paper on the 3rd February – proposing a distinct Welsh regulatory model, including:

A dedicated Welsh economic water regulator

- Designed specifically around Welsh policy priorities and sector structure
- Environmental regulation remains with Natural Resources Wales

Environmental and public health at core

- Driven by Wellbeing of Future Generations Act – the environment, public health and ecosystem resilience will be central outcomes for regulation

A Whole-system planning approach

- Integration of water governance with land use, agriculture and climate adaptation
- Emphasis on catchment-based solutions and upstream prevention

The regulatory cycle

PR & AMP

- Price Reviews (**PR**) followed by an Asset Management Period (**AMP**)
- Ofwat plays a vital role in overseeing the market

How?

- 5 Year Business Plans submitted to Ofwat for scrutiny and approval
- Ofwat issues draft and final determinations which set out a five-year price and service package

Wider ecosystem & Key actors

End Users

Customers, Businesses

Service Providers

Water companies, Retailers

Policy Authorities

Governments, Regulators, LEPs

Capital & Funding

Investors, Funding agencies

Research & Education

Universities, Water Research Hubs, Collaborative R&D initiatives

Media & Public Narrative

Media , Influencers

Current challenges facing the sector

Exciting time to be part of water sector transformation...

The water sector faces unprecedented challenges in the UK and globally.

All are challenging conventional approaches to water management and the operations of Water Only and Water and Sewerage Companies.

Key challenge areas

Asset Resilience & Health

Ensuring water infrastructure remains reliable and adaptable through condition assessment, predictive maintenance and digital monitoring solutions.

Leakage Reduction

Applying advanced detection, pressure management and network optimisation to minimise losses and improve distribution system efficiency.

Water Quality & Micropollutants

Managing emerging contaminants to protect ecosystems and public health while meeting regulatory and environmental standards.

Storm Overflow Management

Reducing storm overflow events through network capacity upgrades, smart controls and integrated drainage to protect rivers and coastal waters.

Key challenge areas

Catchment Management & NbS Scaling

Using catchment-wide approaches and nature-based solutions to improve water quality, manage flooding and deliver environmental co-benefits.

Water Efficiency, Circular Economy & Reuse

Reducing system and customer demand through behaviour change.
Recovering water and energy from systems to minimise waste and improve efficiency.

Decarbonisation

Delivering operational and embodied carbon reductions via energy optimisation, renewables integration and low-carbon process innovation.

The water sector is changing but BAU is simply not enough

Then...

- Water sector criticised for speed at which innovation is developed and deployed.
- Difficult to get into the sector, as an innovator.
- Traditional industry priding itself as a silent-service, favouring reliability over experimentation.

Now...

Unprecedented collective energy and ambition to leverage innovation to support:

- Co-creation of practical, cost-effective solutions to current and future operational challenges.
- Development and deployment of technologies, skills and innovation culture that enables the water sector to rise to the challenges we face, as a civilization.

Where we need to go...

- Resilience
- Digitalisation
- Net Zero
- Systems Thinking

Barriers to innovation

What does good look like?

Value proposition:
explainable and testable

Systems thinking:
nodes, edges and boundaries

Perspective:
what do you see that we don't?

Why do promising innovations stall?

The failure of water innovations is **often not due to flaws in the solution** itself. More often, the barriers lie in how the market perceives, adopts and integrates these solutions. The real challenge is translating an idea into something that utilities and regulators **trust enough to implement at scale**.

Technology – market mismatch

- Innovators will design around the technology, not the real problem.
 - E.g.: solutions that optimise niche processes but don't solve urgent, system-level challenges.
- Innovation without a clear demand stalls.

Risk-averse sector

Why utilities move slowly:

- Reliability is prioritised over novelty.
- Procurement processes in the sector are lengthy.
- Innovations often require approvals from several decision-makers.

Hidden barriers

- Lack of demonstrable proof at scale.
- Early grants get ideas started; commercial investment is harder to secure.
- Compliance requirements delay the pace of adoption.
- Misaligned incentives between stakeholders.

Lessons for innovators

- Innovators should **start with the problem rather than the technology**, ensuring their solutions directly address urgent sector needs.
- **Building credibility** early through pilots, transparent performance data and trusted partnerships is essential for gaining trust.
- Successful innovations **plan carefully for adoption pathways**, including understanding procurement cycles and regulatory approvals.
- Designing solutions that **integrate seamlessly with existing infrastructure**, rather than requiring disruptive change, greatly increases adoption potential.

Lessons for innovators

Collaboration is key

- Progress depends on collaboration between innovators, utilities, regulators, investors and communities.
- Helps spread both the risks and the benefits of adoption, making it easier for utilities to take the leap.
- Partnerships where utilities provide testbeds, regulators offer supportive frameworks and investors co-fund pilots often create the strongest pathway to scale.

Shaping a compelling case:

- To succeed, innovators must move beyond efficiency and cost as their only selling points.
- The strongest cases emphasise resilience, ESG outcomes, compliances assurance and long-term operational savings.

Innovation opportunities

A graphic of stylized water droplets in a dark red color, arranged in a diagonal line from the bottom left towards the top right, set against a solid blue background.

UK Water Innovation Strategy 2050

The UK 2050 Water Innovation outlines a UK wide strategy for transformational innovation. It sets out 7 key themes, that have been identified as the focuses for innovation.

PROVIDING THE SERVICES SOCIETY NEEDS, EXPECTS AND VALUES

AMBITIONS FOR 2050

Customers have trust and confidence in the service that the water sector provides
Water services are accessible, affordable for all, protect vulnerable customers and lead to zero customers in water poverty by 2030
Service provision is transparent, and customers and communities work with water companies to improve service and decision making

PROVIDING CLEAN WATER FOR ALL

AMBITIONS FOR 2050

Drinking water supply is low impact and sustainable
UK water supply is reliable with zero interruptions
We provide enough water for all across the UK

PROTECTING AND ENHANCING NATURAL SYSTEMS

AMBITIONS FOR 2050

Wastewater services are environmentally sustainable
We work with customers to halve freshwater abstractions, leaving more water in the environment
Water companies work in collaboration with customers and communities to have zero uncontrolled discharges from sewers
Emerging contaminants and lead are dealt with effectively causing zero harm for people and the environment
We have developed, protected and enhanced our natural environment
We have used natural solutions to improve our resilience to current and future challenges

DELIVERING RESILIENT INFRASTRUCTURE SYSTEMS

AMBITIONS FOR 2050

We work with customers to develop resilient human, physical and digital systems which can adapt to known and unknown future challenges
Our assets are maintained for the long term providing economic, social and environmental value

ACHIEVING NET ZERO CARBON

AMBITIONS FOR 2050

We have achieved operational and value chain carbon negativity
We have implemented carbon sequestration across the water sector
Customers, communities, water companies and the supply chain work together to achieve carbon neutrality across the value chain

TAKING A WHOLE LIFE APPROACH TO RESPONSIBLE CONSUMPTION AND PRODUCTION

AMBITIONS FOR 2050

We have maximised the recovery and reuse of resources to support sufficient resource availability for nature and society and achieved zero waste
We have sustainably achieved zero leakage

ENABLING DIVERSE FUTURE-READY PEOPLE AND PARTNERSHIP WORKING

AMBITIONS FOR 2050

We have a shared innovation culture which improves customer experience
Collaboration pathways are paved between water companies, regulators, supply chains, SMEs, start-ups, academia, customers and other innovators to allow innovation to work
The whole sector's workforce has the skills and diversity of thought to take an active approach to prepare for and address emerging challenges
The UK regulatory framework has evolved to incentivise innovation to benefit customers and the environment

[UK 2050 – Water Innovation Strategy](#)

Innovation themes across the water cycle

[UK 2050 – Water Innovation Strategy](#)

Innovation opportunities

In line with the challenges outlined in slides 16 & 17, some potential innovation opportunities are highlighted below.

This is not an exhaustive list but we have listed some example solutions below...

- Can monitor buried, inaccessible assets without excavation
- Can create autonomous, smart overflow networks
- Improve access to low-cost methods for proactive monitoring

- Help measure the multi-benefit value of NbS
- Encourage water conservation and/or grey water use
- Capture chemical energy from wastewater

- Help water companies make effective data driven investment decisions
- Optimise energy use of pumps/blowers in real time
- Can selectively remove PFAS, microplastics and micropollutants

Entry period closes 8 April 2026 at 1pm (BST)
